1) Download Python 3.6.2 (Go here https://www.python.org/downloads/release/python-362/)
   Scroll to the bottom of the page and pick the package for your OS… If you know your OS is 64-bit, it can be slightly better, but x86 will work perfect for this class.

2) Make sure to choose the option to add PYTHON to your path:

3)

I always choose to install for all users, and then put it right at the root of C:… just makes it easy, but either way you do it is fine.

4)
